

Alp Kaan Erkul

Architect | Construction Management & Digital Transformation

Ankara, Türkiye · benkaanerkul@gmail.com · +90 539 560 08 89 · [LinkedIn](#) · [Website](#)

RESEARCH PROFILE

Architect with construction-industry experience across site, technical-office, project-coordination, and executive-support environments at a major Turkish contractor, where I have worked **since 2023**. Holding an MSc in Informatics in Construction Management and with a peer-reviewed conference paper accepted for oral presentation at SURE-Built 2026, I am moving from industry practice towards rigorous academic research. My interest centres on how organisational routines, managerial commitment, governance, and implementation practices shape the value organisations realise from construction software, and on the gap between the capabilities technology offers and the outcomes organisations actually achieve.

RESEARCH INTERESTS

- Digital transformation in construction; business value realisation from construction software
- Organisational capabilities and technology implementation
- Project and process management; construction information systems
- Technology adoption and governance
- Digital platforms and decision support

EDUCATION

MSc in Informatics in Construction Management

2024 - 2025

Istanbul Technical University, Türkiye

Selected coursework: Business Process Management; Strategic Management; Managerial and Engineering Economics; Construction Planning and Scheduling; BIM and Digital Project Delivery; Construction Contracts and Delivery Systems; Executive Decision-Making; Sustainable Construction Management.

Bachelor of Architecture

2018 - 2023

Çankaya University, Türkiye

RESEARCH EXPERIENCE AND ANALYTICAL PROJECTS

Erkul, A. K., & İlter, A. T. (2026). "Mapping XR Applications in Cultural Heritage Projects: A PMBOK-Based Meta-Classification Review."

Accepted for oral presentation (double-blind peer review), 2nd Global Scholarship for Sustainable Built Environment Research Conference (SURE-Built 2026), University of Johannesburg, South Africa, 3–4 September 2026.

- Conducted a systematic, PRISMA-guided review of **127 studies** published between 2015 and 2025.
- Developed a meta-classification framework mapping XR applications against PMBOK lifecycle phases and knowledge areas.
- Identified underexplored areas including cost management, initiation and closing phases, lifecycle integration, and HBIM relationships.

Methods applied: Systematic literature review; structured coding and classification; descriptive synthesis; research-gap identification; academic writing and revision.

Selected MSc Analytical Projects

Agile Project-Management Software Selection for a Construction Organisation (with O. Uysal)

- Evaluated Trello, ClickUp, Asana, Jira, Monday.com and Microsoft Planner against criteria covering cost, Agile functionality, integrations, usability, reporting, storage, and implementation requirements.
- Applied decision-matrix, SAW, TOPSIS, ranking, group-decision, and sensitivity-analysis approaches.

Tower Crane Investment and Replacement Analysis

- Applied payback-period analysis, annual-equivalent analysis, economic service-life assessment, and defender–challenger replacement analysis.
- Evaluated investment alternatives under defined interest-rate and overhaul scenarios.

PROFESSIONAL EXPERIENCE

YDA Group — Ankara, Türkiye

Technical Assistant to the CEO

16.08.2025 – Present

- Translate executive-level requests and multidisciplinary project information into structured workflows, reports, follow-up systems, and decision-support materials, keeping multi-project decisions on schedule.
- Reviewed international machinery and equipment supply agreements valued nearly a total of **€16 million**, identifying buyer-side commercial, contractual, and technical risks and preparing revision recommendations for senior management, protecting the company's position before signature.
- Conducted clause-by-clause reviews across MoUs, offers, specifications, and contract drafts, catching deviations in scope, Incoterms, guarantees, and dispute resolution.
- Prepared and coordinated negotiation positions on non-price contractual and technical provisions, working with legal advisers, engineering teams, and international suppliers through successive review meetings and final agreement discussions.

- Structured and facilitated final negotiation meetings between the CEO and supplier representatives, presenting risk analyses and proposed revisions to support executive decision-making and contract execution.
- Coordinate information across senior management, technical teams, project organisations, and international operations, and build the tracking and reporting tools behind it.

Project Coordination Specialist / Technical Office Architect

01.06.2024 – 16.08.2025

- Supported coordination and technical-office processes for earthquake-reconstruction village-housing projects in Adiyaman and Gaziantep involving approximately **1,596 housing units**.
- Contributed to project scheduling, cost forecasting, subcontractor progress-payment processes, material approvals, document control, and coordination between site and headquarters.
- Used Primavera P6, MS Project, and Excel to structure project information and support management decisions.

Site and Technical Office Architect

20.09.2023 – 01.06.2024

- Supported architectural site execution, technical-office processes, quantity and payment documentation, material coordination, and project-handover activities.
- Contributed to the temporary-acceptance and project-closeout process for the Vaccine Centre project.

SELECTED DIGITAL SYSTEMS AND RESEARCH-ORIENTED PROJECTS

Macro-Enabled Procurement and Tracking Workflow (MaterialFlow)

- Developed a centralised Excel/VBA workflow consolidating supplier, request, approval, and purchasing data into a single traceable process.
- Automated request numbering, document generation, and archiving; technically tested the workflow before moving to a new role prior to organisational rollout.

OfficeQueue — Workflow and Scheduling Prototype

- Prototyped a React-based workflow and scheduling application exploring task prioritisation, deadlines, time blocks, travel constraints, and automatic planning logic.
- Used the project to investigate how management routines can be translated into practical digital workflows.

Integrated Construction-Management System Concept (Valora)

- Conceptualised an integrated construction-management environment for progress payments, quantity and cost information, unit prices, supplier records, organisational information, and decision support.
- Focused on links between fragmented construction data, organisational routines, reporting, and managerial decision-making.

PROFESSIONAL SKILLS

Research and Analysis: Systematic literature review; structured classification and coding; research-gap identification; comparative analysis; multi-criteria decision-making; sensitivity analysis; academic writing and reference management.

Contract Review and Commercial Analysis: International supply agreements; buyer-side risk analysis; Incoterms; payment and guarantee structures; technical-scope assessment; negotiation preparation and facilitation; bilingual executive reporting.

Project and Process Management: Construction planning and scheduling; technical-office management; progress-payment processes; cost and quantity tracking; business-process mapping; workflow design; management reporting; stakeholder coordination.

Software and Digital Tools: Microsoft Excel and VBA; Primavera P6; Microsoft Project; Power BI; Autodesk Revit; Autodesk Navisworks; AutoCAD; React-based prototyping.

SELECTED PROFESSIONAL DEVELOPMENT CERTIFICATES

- Construction Project Management — Columbia University (Coursera), 2023.
- Project Scheduling — Columbia University (Coursera), 2024.
- Construction Cost Estimating and Cost Control — Columbia University (Coursera), 2024.
